Photos shot are too blurred	1. The object shot is moving;
	2. Your hand shakes when the shutter is pressed.
Photos shot are distorted	The object shot is too close to the lens.
Cannot access the service menu	The SIM card may not support the service.

V. Specific Absorption Rate:

Mobile device is a radio transmitter and receiver. It is designed to not exceed the limits for exposure to radio waves Recommended by various governments. In India, these guidelines were developed by the Government of India, Department of Telecommunications, Ministry of Communications and IT and include safety margins design to assure the Protection of all persons, regardless of age and health, and to account for any variations in measurements.

The guidelines use a unit of measurement known as the Specific Absorption Rate (SAR). SAR level for mobile handsets Shall be limited to 1.6 Watt/kg, averaged over a 6 minutes period and taken over a volume containing a mass of 1 gram of Human tissue.

Highest SAR Value for MT401 as below-

For GSM 900MHz – When tested on head - 0.982 Watt/Kg
　　　　　　　　　When tested on body - 0.732 Watt/Kg

For GSM 1800MHz – When tested on head - 1.121 Watt/Kg
　　　　　　　　　When tested on body- 0.913 Watt/Kg

As SAR is measured utilizing the mobile device's highest transmitting power, the actual SAR of this mobile device while Operating is typically below that indicated above. This is due to automatic changes to the power level of the mobile device To ensure that it only uses the minimum level required to each the network. While there may be differences between the SAR levels of various mobile devices and at various positions, they meet the governmental requirements for safe exposure. Please note that improvements to this product model could cause differences in the SAR value for later products; in all cases, Products are designed to be within the guidelines. The World Health Organization has started that present scientific Information does not indicate the need for any special precautions for the use of mobile devices. They note that if you want To reduce your exposure, then you can do by limiting the length of calls or using a hands-free device to keep the mobile Device away from the head and body.

Specific Absorption rate (Safety Precautions) :-

a)   Use A wireless hands-free system (headphone, headset) with a low power Bluetooth emitter.
b)   Make Sure the cell phone has a low SAR.
c)   Keep your calls short or send a text message(SMS) instead. This advice applies especially to children ,adolescents and pregnant women.
d)   Use cell phone when the signal quality is good.
e)   People having active medical implants should preferably keep the cell phone at least 15cm away from the implant**.**
