IV. Troubleshooting:

<u>Failure</u>	Solution
The Phone fails to power on	1.Check that the battery is charged;
	Check that the battery is installed correctly.
Insert SIM card error	1.Check whether the SIM card is dirty, if card is dirty, clean it;
	2. Reinstall the SIM card;
	If the SIM card is damaged replace the SIM card.
Low network	Check the signal strength indicator on the screen. 4 bars indicate strong signal and 2 bars or
	less indicates a weak signal.
Call registration fails	 You might have set the Hide Caller ID but the network operator does not support this service;
	2. There may be strong signal interference;
	You might have activated the Call Barring function;
	You might have activated Line 2 but the network operator may not support this service.
Battery fails to charge	1. The battery may have excessively discharged To charge the battery it is necessary to connect
	it to a charger for certain period of time;
	2.The battery may have been deteriorated.
Cannot connect to the network	 Check whether signal is too weak or wireless interference exists around;
	Check whether the SIM card is installed correctly, poor connection exists or the SIM card is
	Damaged. If the SIM card is damaged please contact the network operator.
Photos shoot are too dark	 The brightness is set too low;
	2. The ambient light is too dark.
Photos shot are too blurred	The object shot is moving;
	Your hand shakes when shutter is pressed.
Photos shot are distorted	The object shot is too close to the lens.
Cannot access the service menu	The SIM card may not support the service.

V. Specific Absorption Rate:

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves Recommended by international guidelines. These guidelines were developed by the independent scientific organization ICNIRP And include safety margins designed to assure the protection of all persons, regardless of age and health.

The exposure guidelines for mobile devices employ a unit of measurement known as the Specific Absorption Rate or SAR. The SAR limit stated in the ICNIRP guidelines is 2.0 watts/kilogram (W/kg) averaged over 10 grams of tissue.

MAX SAR MEASUREMENT (10e) for MX103

For GSM 900MHz - Head: 1.01 watt/Kg

Body: 0.581 watt/Kg

For GSM 1800MHz - Head: 0.290 watt/Kg

Body: 0.100 watt/Kg

Your mobile device is also designed to meet the requirements for exposure to radio waves established by the India Department of Telecommunications. These requirements set a SAR limit of 1.6 W/kg averaged over one gram of tissue

In India, these guidelines were developed by the Government of India, Department of Telecommunications, Ministry of Communications and IT and include safety margins design to assure the Protection of all persons, regardless of age and health, and to account for any variations in measurements.

The guidelines use a unit of measurement known as the Specific Absorption Rate (SAR), SAR level for mobile handsets Shall be limited to 1.6 Watt/kg, averaged over a 6 minutes period and taken over a volume containing a mass of 1 gram of Human tissue. Highest SAR Value for MX103 as below

For GSM 900MHz — When tested on head — 1.45 Watt/Kg

When tested on body — 0.838 Watt/Kg

For GSM 1800MHz - When tested on head — 0.578 Watt/Kg

When tested on body - 0.183 Watt/Kg

As SAR is measured utilizing the mobile device's highest transmitting power, the actual SAR of this mobile device while operating is typically below that indicated above. This is due to automatic changes to the power level of the mobile device to ensure that it only uses the minimum level required to each the network. While there may be differences between the SAR levels of various mobile devices and at various positions, they meet the governmental requirements for safe exposure.

Please note that improvements to this product model could cause differences in the SAR value for later products; in all cases, products are designed to be within the guidelines. The World Health Organization has started that present scientific Information does not indicate the need for any special precautions for the use of mobile devices. They note that if you want to reduce your exposure, then you can do by limiting the length of calls or using a hands-free device to keep the mobile device away from the head and body.

Specific Absorption rate (Safety Precautions):

- a) Use A wireless hands-free system (headphone, headset) with a low power Bluetooth emitter.
- b) Make Sure the cell phone has a low SAR.
- c) Keep your calls short or send a text message(SMS) instead. This advice applies especially to children ,adolescents and pregnant women.
- d) Use cell phone when the signal quality is good.
- e) People having active medical implants should preferably keep the cell phone at least 15cm away from the implant.

VI. Terms & Conditions for Warranty

MAXX MOBLINK offer 12 months limited warranty for the transceiver set from date of import or 12 months Limited Warranty for the transceiver set from date of purchase or whichever is earlier.

Warranty for the accessories -Battery, Travel Charger, Data Cable & Earphone will be 6 months from date of purchase which is provided along with phone package and should be within 12 months warranty period from date of import or whichever is earlier.
