2   Customi e the following settings

- **On** Enable to use data connections on mobile networks
- **Limit mobile data usage** Set a limit for mobile data usage to block mobile data if the limit is reached
- ⋮ Customi e the desired mobile data settings

Advanced Calling (This function may vary depending on the service provider)

ou can turn HD oice on and off

n the settings screen tap **Network & internet** > **Advanced Calling**

Call

ou can customi e call settings such as voice call and international call options

📝   •   Some features may not be supported depending on the area or service provider

1   n the settings screen tap **Network & internet** > **Call**

2   Customi e the desired settings

Tethering

USB tethering

You can connect the device to another device via USB and share mobile data.

1 Connect your device and other devices via USB cable.

2 On the settings screen, tap **Network & internet** > **Tethering** > **USB tethering** and then tap ⬭ to activate it.

- This option uses mobile data and may incur data usage fees, depending on your pricing plan. Consult with your service provider for more information.

- When connecting to a computer, download the USB driver from *www.lg.com* and install it on the computer.

- You cannot send or receive files between your device and a computer while USB tethering is turned on. Turn off USB tethering to send or receive files.

- Operating systems that support tethering are Window XP or higher, or Linux.
Wi-Fi hotspot

ou can set the device as a wireless router so that other devices can connect to the Internet by using your devices mobile data

1   n the settings screen tap **Network & internet** > **Tethering** > **Wi-Fi hotspot** and then tap ⬤▭ to activate it

2   Tap **Set up Wi-Fi hotspot** and enter the   i- i name SSID and password

3   Turn on   i- i on the other device and select the name of the device network on the   i- i list

4   Enter the network password

> • This option uses mobile data and may incur data usage fees depending on your pricing plan Consult with your service provider for more information
>
> • More information is available at this web site
>   *http   www android com tether wifi*
Timeout

hen the   i- i hotspot has not been used for a specific period of time it is automatically disconnected   ou can set the time for automatic disconnection

Bluetooth tethering

A Bluetooth-connected device can connect to the internet by using your devices mobile data

1. n the settings screen tap **Network & internet** > **Tethering** > **Bluetooth tethering** and then tap ⬭ to activate it

2. Turn on Bluetooth on both devices and pair them

3. Connect to the mobile network on the paired device

> - This option uses mobile data and may incur data usage fees depending on your pricing plan
> - More information is available at this web site
>   *http www android com tether Bluetooth tethering*
Help

ou can view help on using tethering and hotspots

n the settings screen tap **Network & internet** > **Tethering** > **Help**

Mobile networks

ou can customi e the following mobile network settings

1   n the settings screen tap **Network & internet** > **Mobile networks**

2   Customi e the following settings

- **VoLTE (This function may not be available depending on the service provider)**   ou can enable HD oice and advanced communication services where available

- **Data roaming** Turn data roaming on or off

- **Disable 2G** Allows you to disable 2G service on your phone

- **Access Point Names**   iew or change the access point for using mobile data services To change the access point select a choice from the access point list

VPN

ou can connect to a safe virtual network such as an intranet   ou can also manage connected virtual private networks

Adding VPN

1   n the settings screen tap **Network & internet** > **VPN**

2   Tap ╋ to add a new   P

> • This feature is available only when the screen lock is activated If the screen lock is deactivated a notification screen appears Tap **SETTINGS** from the notification screen to activate the screen lock See *Setting a screen lock* for details

3   Enter   P   details and tap **SAVE**

Configuring VPN settings

1   Tap a   P   from the **VPNS** list

2   Enter the P   user account details and tap **CONNECT**
   • To save the account details select the **Save account information**
     checkbox

Wireless Emergency Alerts

If emergency alerts are issued those alerts will appear on this menu

   n the settings screen tap **Network & internet** > **Wireless Emergency Alerts**

Connected devices

Bluetooth

   ou can connect your device to nearby devices that support Bluetooth to exchange data with them Connect your device to a Bluetooth headset and a keyboard This makes it easier to control the device

Pairing with another device

1   n the settings screen tap **Connected devices** > **Bluetooth**

2   Tap ⬤ to activate it
   • Available devices appear automatically
   • To refresh the device list tap ↻

	• nly devices set as visible are displayed on the list

3   Select a device from the list

4   ollow the on-screen instructions to perform authentication

	• This step is skipped for previously accessed devices

Sending data via Bluetooth

1   Select a file

- ou can send multimedia files or contacts

2   Tap ⤶ > **Bluetooth**

3   Select a target device for the file

- The file is sent as soon as the target device accepts it

> - ile sharing processes may differ depending on the file

Sharing panel

ou can share contents from Gallery Music and   ile Manager with nearby devices Also you can share content with specific people in apps that work with Google Direct Share

1   n the settings screen tap **Connected devices** > **Sharing panel**

2   Tap **Direct share** ⬤ to deactivate the option

Printing

ou can connect your device to a Bluetooth printer and print photos or documents saved on the device

1   n the settings screen tap **Connected devices** > **Printing**

> - If the desired printer is not in the list install the printer driver from the app store

2   Select a printer from the printer list screen

3   Tap ⬤ to activate it

- To add a printer tap ⋮ > **Add printer**
- To search for a printer name tap ⋮ > **Search**
- Tap ⋮ > **Settings** from the printer list screen

4   Select a file and tap ⋮ > **Print**
-    The document prints

📝   -   If you do not have a Google account tap **ADD ACCOUNT** to create an account

---

Sound

ou can customi e sound vibration and notification settings

 n the settings screen tap **Sound** and customi e the following settings

-    **Sound profile** Change the sound mode to **Sound Vibrate only** or **Silent**
-    **Volume** Ad ust the sound volume for various items
-    **Ringtone** Select a ringtone for incoming calls Add or delete ringtones
-    **Ringtone ID** Create a ringtone for an incoming call from a particular contact
-    **Ring with vibration** Set the device to vibrate and play a ringtone simultaneously
-    **Notification sound** Select a notification ringtone Set music saved on the device as a notification ringtone
-    **Do not disturb** Set the time range and app type to receive notification messages Receive notification messages only on particular days of the week
-    **Vibration type**   ou can select the type of vibration when receiving calls
-    **Vibrate on tap** Set the device to vibrate when you tap certain items on the screen
-    **Dialing keypad sound** Enable the keypad sound effect
-    **LG Keyboard sound** Enable the G keyboard sound effect
-    **Touch sound** Enable the sound effect for tapping an item

- **Screen lock sound** Enable the sound effect to play when the screen is locked or unlocked
- **Emergency tone** Set behavior when an emergency call is made

Display

The Display category allows you to manage various display settings

 n the settings screen tap **Display** and customi e the following settings

- **Home screen** Customi e settings for the Home screen See *Home screen settings* for details
- **Wallpaper & theme** Select wallpaper or screen theme for your device
- **Font** Change the font si e boldness or face
- **Home touch buttons** Rearrange Home touch buttons or change their background colors
- **Display size** Set the items on the screen to a si e that is easy for you to see Some items may change position

> • hen you change the screen resolution currently running apps are closed

- **Comfort view** Set the device to reduce amount of blue light on screen to reduce eye strain
- **Brightness** se the slide bar to change the devices screen brightness To automatically ad ust screen brightness according to ambient light intensity tap the **Auto** switch
- **Auto** Set the device so that the screen brightness is automatically ad usted in accordance with the ambient light intensity
- **Auto-rotate screen** Automatically rotate the screen according to the devices orientation
- **Screen timeout** Automatically turn off the screen when the device is left idle for a specified period of time
- **Screen saver** Display a screen saver when the device is connected to the holder or charger Select a screen saver type to display

Lock screen & security

ou can customi e lock screen and security settings   n the settings screen tap **Lock screen & security.**

- **Google Play Protect** Scan the device periodically for potentially harmful codes or apps

- **Find My Device** Remotely track the device location   ou can also protect your data securely if you lost your device

- **Security update** Check for software update and configure automatic installation settings

- **Select screen lock** Select the desired screen lock method See *Setting a screen lock* for details

- **Customize Lock screen** Change the information displayed on the locked screen

- **Secure lock settings** Change the secure lock settings

- **Content lock** Allows you to set a lock type password or pattern for your QuickMemo+ and Gallery files

- **Location**   ou can customi e how your location information is used by particular apps

- **Encryption & credentials** Configure the settings for SD card encryption and credentials

  - **Encrypt SD card** Encrypt the memory card to prevent use on another device See *Memory card encryption* for details

  - **Secure start-up** Protect your device with a lock when it powers on See *Secure start-up settings* for details

  - **Credential protection**   iew the type of the storage where the security certificate will be saved

  - **Trusted credentials**   iew your systems root CA certificates and user-installed CA certificates

  - **User credentials**   iew and change secure certificate information stored on your device

  - **Install from storage** Install a secure certificate from a storage

- **Clear credentials**: Delete user-installed secure certificates and related credentials

• **Set up SIM card lock**: ock or unlock the SIM card or change the password PI

• **Make passwords visible**: Enable this option to briefly show each character of the password as you type it so you can see what you ve entered

• **Phone administrators**: Allows privileges to restrict the control or use of the device to particular apps

• **Trust agents**: iew and use trust agents installed on the device

• **Screen pin**: ix the app screen so that only the currently active app can be used

• **Usage access**: iew details on usage of apps on the device

Extensions

Smart cleaning

ou can clean up temporary files or apps that are no longer used to free up storage space

1   n the settings screen tap **Extensions** ＞ **Smart cleaning**

2   Select a category then select an item to delete

3   Tap **DELETE** ＞ **DELETE** to delete the selected item

Gaming

ou can configure settings for game tools graphics and battery saving feature

• **Game tools**: Tap ⬤▭ to activate this feature   ou can launch this feature by tapping the game tool icon at the bottom of the screen while playing games

• **Game graphics**: Ad ust the game graphics

| • | hen you change the resolutions on some games the screen display feature may not work properly |

• **Break time** Reduce the screen brightness and performance whenever you leave the game running for more than 5 minutes

Shortcut keys

ou can use the shortcut keys to directly launch apps when the screen is turned off or locked

n the settings screen tap **Extensions** > **Shortcut keys**

KnockOn

Double-tap the screen to turn the screen on or off

See *nock n* for details

Apps & notifications

ou can check a list of installed apps and configure the settings for notifications app permissions and more

1   n the settings screen tap **Apps & notifications**

2   Customi e the settings as desired

Battery

ou can view the current battery information or turn on power-saving mode

1   n the settings screen tap **Battery**

2   Customi e the following settings

- **Battery usage**   iew the battery usage details To view more details select a specific item

- **Battery percentage on status bar** Display the remaining battery level as a percentage on the status bar

- **Battery saver** Reduce battery consumption by cutting down some device settings such as the display brightness speed and vibration intensity

- **Power saving exclusions** Select apps to use without any functional limitation while in power saving or battery optimi ation mode

Storage

ou can view and manage internal storage on the device or storage space of the memory card

1   n the settings screen tap **Storage**

2   Customi e the following settings

- **Internal storage**   iew the total storage space and free space in the devices internal storage   iew a list of apps in use and the storage capacity for each app

- **SD card**   iew the total storage space and free space in the memory card This option appears only when a memory card is inserted To unmount the memory card tap △

Accounts

You can add or manage accounts, including a Google account. You can also sync particular apps or user information automatically.

1   On the settings screen, tap **Accounts**.

2   Customize the following settings.

   - **Auto-sync accounts**: Sync all the registered accounts automatically.
   - **ACCOUNTS**: View a list of registered accounts. To view or change details of an account, tap the account.
   - **Add account**: Add accounts.

Accessibility

You can manage accessibility plug-ins installed on your device.

1   On the settings screen, tap **Accessibility**.

2   Customize the following settings.

   - **Vision** > **TalkBack**: Set the device to notify screen status or actions via voice.
   - **Vision** > **Voice notifications**: Set the device to read the caller information or message content via voice.
   - **Vision** > **Font**: Change the font size, boldness, or face.
   - **Vision** > **Display size**: Set the items on the screen to a size that is easy for you to see. Some items may change position.
   - **Vision** > **Touch zoom**: Zoom in or out by tapping the screen three times.
   - **Vision** > **Window zoom**: Zoom in or out within a window and invert the color.
   - **Vision** > **Large mouse pointer**: Magnify the mouse pointer.
   - **Vision** > **High contrast screen**: Turn the background color into black for a high contrast screen.

- **Vision** > **Screen color inversion** Increase the display color contrast for people with low vision
- **Vision** > **Screen color adjustment** Ad ust the display color
- **Vision** > **Grayscale** Switch the screen to grayscale mode
- **Vision** > **End call with the Power key** End a call by pressing the Power ock key
- **Hearing** > **Captions** Turn on the subtitle service when playing videos for the hearing impaired
- **Hearing** > **Flash alerts** Set the device to notify you with a blinking light for incoming calls messages and alarms
- **Hearing** > **Mute all sounds** Mute all sounds and lower volume on the receiver
- **Hearing** > **Audio channel** Select the audio type
- **Hearing** > **Sound balance** Ad ust the audio output balance   se the slide bar to change the balance
- **Motor & cognition** > **Touch assistant** Turn on the touch board to make buttons and gestures easier to use
- **Motor & cognition** > **Touch input** Set the desired delay time for touching and holding or ad ust the touch input to ignore repeated taps
- **Motor & cognition** > **Physical keyboard** Customi e the keyboard settings
- **Motor & cognition** > **Auto mouse click** Automatically click where the pointer stops
- **Motor & cognition** > **Touch and hold for calls** Answer or decline calls by touching and holding the call button instead of dragging it
- **Motor & cognition** > **Screen timeout** Turn off the screen automatically when the device is left idle for a specified period of time
- **Motor & cognition** > **Touch control areas**   imit the touch area so that only a particular portion of the screen can be controlled by touch input

- **Accessibility features shortcut** Quickly access a fre uently used function by tapping ◯ three times
- **Auto-rotate screen** Automatically change the screen orientation according to the physical position of the device
- **Select to Speak** Allows you to tap items to hear spoken feedback
- **Switch Access** Create key combinations to control your device

Google

ou can use Google settings to manage your Google apps and account settings

n the settings screen tap **Google**

System

Update center

rom time to time updates may become available for your phone   ou can download and apply updates through the Settings menu

n the settings screen tap **System** > **Update center**

Language & input

ou can customi e language and keyboard settings for your device

1   n the settings screen tap **System** > **Language & input**

2   Customi e the following settings

- **Language** Select a language to apply for the device
- **Current keyboard**   iew the keyboard currently in use Select a keyboard to use when entering text
- **On-screen keyboard** Change the   G keyboard settings or voice recognition feature of Google   oice

- **Physical keyboard** Select to use the physical keyboard or check keyboard shortcut keys
- **Autofill service** Enable this option to enter your information saved in your account such as password address or credit card number with a single tap ou can also disable this option use Google Autocomplete or add a new service account
- **Text-to-speech output** Configure the settings for text-to-speech output
- **Pointer speed** Ad ust the pointer speed of a mouse or trackpad
- **Reverse mouse buttons** Reverse the right mouse button to perform primary direct-manipulation actions

Date & time

ou can customi e date and time settings for your device

1 n the settings screen tap **System** > **Date & time**

2 Customi e the desired settings

Memory

ou can view the average amount of memory usage over a certain period of time and the memory occupied by an app

1 n the settings screen tap **System** > **Memory**

2 Tap ▼ to set a time slot to retrieve data

Backup

ou can back up data saved on your device to another device or account

1 n the settings screen tap **System** > **Backup**

2 Customi e the following settings

- **Google backup** Change Google drive backup settings ou can also check the backup account currently used or add a new backup account

Restart & reset

ou can reset the device including network and app settings

1   n the settings screen tap **System** > **Restart & reset**

2   Customi e the following settings

- **Auto-restart** Automatically restart the phone once a week The phone will restart within one hour of the set time

> - Any unsaved data and notifications including badges will be cleared after a restart Make sure you save what you are doing

- **Network settings reset** Reset   i- i Bluetooth and other network settings
- **Reset app preferences** Reset the settings for an app The data saved in the app will not be deleted
- **Factory data reset** Reset all settings for the device and delete data

> - Resetting your device deletes all data on it Enter your device name Google account and other initial information again

About phone

ou can view information about your device such as the name status software details and legal information

n the settings screen tap **System** > **About phone** and view information

05

Appendix

LG Language Settings

Select a language to use on your device

- Tap ◯ > **Tools** > **Settings** > **System** > **Language & input** > **Language** > **ADD LANGUAGE** and select a language

  - Touch and hold ☰ and drag it to the top of the language list to set it as a default language

Phone software update

LG Mobile phone software update from the Internet

 or more information about using this function please visit *http   www lg com common index sp* select your country and language

This feature allows you to conveniently update the firmware on your phone to a newer version from the Internet without needing to visit a service center This feature will only be available if and when G makes a newer firmware version available for your device

Because the mobile phone firmware update re uires the user s full attention for the duration of the update process please make sure you check all instructions and notes that appear at each step before proceeding Please note that removing the   SB cable during the upgrade may seriously damage your mobile phone

> •   G reserves the right to make firmware updates available only for selected models at its own discretion and does not guarantee the availability of the newer version of the firmware for all handset models

LG Mobile Phone software update via Over-the-Air (OTA)

This feature allows you to conveniently update your phones software to a newer version via TA without connecting a SB cable This feature will only be available if and when G makes a newer firmware version available for your device

To perform the phone software update tap ◯ > **Tools** > **Settings** > **System** > **Update center** > **Software Update**

> 📝 • our personal data from internal phone storage including information about your Google account and any other accounts your system application data and settings any downloaded applications and your DRM license   might be lost in the process of updating your phones software Therefore   G recommends that you backup your personal data before updating your phones software   G does not take responsibility for any loss of personal data
>
> • This feature depends on the area or service provider

Anti-Theft Guide

ou can set up your device to prevent other people from using it if it s been reset to factory settings without your permission   or example if your device is lost stolen or wiped only someone with your Google account or screen lock information can use the device

All you need to make sure your device is protected is

- Set a screen lock If your device is lost or stolen but you have a screen lock set the device can t be erased using the Settings menu unless your screen is unlocked

- Add your Google account on your device If your device is wiped but you have your Google account on it the device can t finish the setup process until your Google account information is entered again

After your device is protected you ll need to either unlock your screen or enter your Google account password if you need to do a factory reset This ensures that you or someone you trust is doing the reset

> - Do not forget the Google account and password you had added to your device prior to performing a factory reset If you can t provide the account information during the setup process you won t be able to use the device at all after performing the factory reset

Open Source Software Notice Information

To obtain the source code under GPL, LGPL, MPL, and other open source licenses, that is contained in this product, please visit
http://opensource.lge.com

In addition to the source code, all referred license terms, warranty disclaimers and copyright notices are available for download.

LG Electronics will also provide open source code to you on CD-ROM for a charge covering the cost of performing such distribution (such as the cost of media, shipping, and handling) upon email request to *opensource@lge.com*

This offer is valid for a period of three years after our last shipment of this product. This offer is valid to anyone in receipt of this information.

FAQ

This chapter lists some problems you might encounter when using your phone Some problems re uire you to call your service provider but most are easy to fix yourself

Message	Possible causes	Possible corrective measures
SIM card error	There is no SIM card in the phone or it is inserted incorrectly	Make sure the SIM card is correctly inserted
o network connection Dropped network	Signal is weak or you are outside the carrier network	Move toward a window or into an open area Check the network operator coverage map
o applications can be set	ot supported by service provider or registration re uired	Contact your service provider
Downloaded application causes a lot of errors	Remove the application	1 Tap ◯ > **Tools** > **Settings** 2 Tap **Apps & notifications** > **App info** 3 Tap the app > **Uninstall**
Calls not available	Dialing error	ew network not authori ed
	ew SIM card inserted	Check for new restrictions
Device cannot be turned on	Battery is not charged	Charge battery Check the charging indicator on the display

Message	Possible causes	Possible corrective measures
Charging error	Battery is not charged	Charge the battery
	utside temperature is too hot or cold	Make sure to charge the device in a moderate temperature environment
	Contact problem	Check the charger and its connection to the device
	o voltage	Plug the charger into a different outlet
	Charger defective	Replace the charger
	rong charger	se only original G accessories
umber not allowed	The ixed dialing number function is on	Check the Settings menu and turn the function off
iles do not open	nsupported file format	Check the supported file formats
The screen does not turn on when I receive a call	Proximity sensor problem	If you use a protection tape or case make sure it has not covered the area around the proximity sensor Make sure that the area around the proximity sensor is clean
o sound	ibration mode	Check the settings status in the sound menu to make sure the device is not in vibration or no interruptions mode

Message	Possible causes	Possible corrective measures
Hangs up or free es	Intermittent software hardware problem	**Restarting the device** If your device free es or hangs you may need to close apps or turn off the device and turn it on again **Performing a boot-up** Press and hold the Power ock key and the olume Down - key for about 10 seconds to restart your device **Resetting the device** If the methods above do not solve your problem perform a factory data reset n the settings screen tap **System ＞ Restart & reset ＞ Factory data reset** Reset all settings for the device and delete data Before performing the factory data reset remember to make backup copies of all important data stored in the device If you registered a Google account to the device you must sign in to the same Google account after resetting the device

06

For Your Safety

Important Information

This user guide contains important information on the use and operation of this device Please read all the information carefully for optimal performance and to prevent any damage to or misuse of the device Any changes or modifications not expressly approved in this user guide could void your warranty for this e uipment Any changes or modifications not expressly approved by the manufacturer could void the user s authority to operate the e uipment

Before You Start

⚠ **Warning** Cancer and Reproductive Harm - www P65 arnings ca gov

HAC Statement

This device has been tested and rated for use with hearing aids for some of the wireless technologies that it uses However there may be some newer wireless technologies used in this device that have not been tested yet for use with hearing aids It is important to try the different features of this device thoroughly and in different locations using your hearing aid or cochlear implant to determine if you hear any interfering noise Consult your service provider or the manufacturer of this device for information on hearing aid compatibility If you have uestions about return or exchange policies consult your service provider or device retailer

This mobile phone has a Hearing Aid Mode that when activated may reduce interference with some hearing aid models

FCC RF Exposure Information

WARNING! Read this information before operating the device.

In August 1996 the ederal Communications Commission   CC of the nited States with its action in Report and rder CC 96-326 adopted an updated safety standard for human exposure to Radio re uency R electromagnetic energy emitted by CC regulated transmitters Those guidelines are consistent with the safety standard previously set by both   S and international standards bodies The design of this device complies with the CC guidelines and these international standards

Body-worn Operation

This device was tested for typical use with the back of the device kept 0 39 inches (1.0 cm) from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 0.39 inches (1.0 cm) must be maintained between the users body and the back of the device Any belt-clips holsters and similar accessories containing metallic components may not be used Avoid the use of accessories that cannot maintain 0.39 inches (1.0 cm) distance between the user's body and the back of the device and have not been tested for compliance with   CC R   exposure limits

Consumer Information about Radio Frequency Emissions

our wireless device which contains a radio transmitter and receiver emits radio fre uency energy during use The following consumer information addresses commonly asked   uestions about the health effects of wireless devices

Are wireless devices safe?

Scientific research on the sub ect of wireless devices and radio fre uency   R energy has been conducted worldwide for many years and continues In the   nited States the   ood and Drug Administration   DA   and the   ederal Communications Commission   CC   set policies and procedures for wireless devices The   DA issued a website publication on health issues related to cell phone usage where it states   The scientific community at large   believes that the weight of scientific evidence does not show an association between exposure to radiofre uency   R from cell phones and adverse health outcomes Still the scientific community does recommend conducting additional research to address gaps in knowledge That research is being conducted around the world and   DA continues to monitor developments in this field   ou can access the oint   DA   CC website at *http   www fda gov* under c in the sub ect index select **Cell Phones ＞ Research**   ou can also contact the   DA toll-free at 888 463-6332 or 888 I   - DA In une 2000 the   DA entered into a cooperative research and development agreement through which additional scientific research is being conducted The   CC issued its own website publication stating that there is no scientific evidence that proves that wireless device usage can lead to cancer or a variety of other problems including headaches di   iness or memory loss This publication is available at *http   www fcc gov cgb cellular html* or through the   CC at 888 225-5322 or 888 CA   - CC

What does "SAR" mean?

In 1996 the CC working with the DA the   S Environmental Protection Agency and other agencies established R   exposure safety guidelines for wireless devices in the   nited States Before a wireless device model is available for sale to the public it must be tested by the manufacturer and certified to the   CC that it does not exceed limits established by the CC   ne of these limits is expressed as a Specific Absorption Rate or SAR SAR is a measure of the rate of absorption of R   energy in the body Tests for SAR are conducted with the device transmitting at its highest power level in all tested fre uency bands Since 1996 the   CC has re uired that the SAR of handheld wireless devices not exceed 1 6 watts per kilogram averaged over one gram of tissue

Although the SAR is determined at the highest power level the actual SAR value of a wireless device while operating can be less than the reported SAR value This is because the SAR value may vary from call to call depending on factors such as proximity to a cell site the proximity of the device to the body while in use and the use of hands-free devices   or more information about SARs visit the   CC website at *https   wwwfcc gov consumers guides specific-absorption-rate-sar-cell-phones-what-it-means-you*   ou may also wish to contact the manufacturer of your device

Can I minimize my RF exposure?

If you are concerned about R   there are several simple steps you can take to minimi e your R   exposure   ou can of course reduce your talk time   ou can place more distance between your body and the source of the R   as the exposure level drops off dramatically with distance The DA CC website states that hands-free kits can be used with wireless devices for convenience and comfort These systems reduce the absorption of R   energy in the head because the device which is the source of the R   emissions will not be placed against the head   n the other hand if the device is mounted against the waist or other part of the body during use then that part of the body will absorb more R   energy   ireless devices marketed in the   S are re uired to meet safety re uirements regardless of whether they are used against the head or against the body Either configuration should result in compliance with the safety limit   Also if you use your wireless device while in a car you can use a device with an antenna on the outside of the vehicle   ou should also read and follow your wireless device manufacturer s instructions for the safe operation of your device

Do wireless devices pose any special risks to children?

The DA CC website states that the scientific evidence does not show a danger to users of wireless communication devices including children The DA CC website further states that some groups sponsored by other national governments have advised that children be discouraged from using wireless devices at all or example the Stewart Report from the nited ingdom made such a recommendation in December 2000 In this report a group of independent experts noted that no evidence exists that using a cell phone causes brain tumors or other ill effects The s recommendation to limit cell phone use by children was strictly precautionary it was not based on scientific evidence that any health ha ard exists A copy of the s leaflet is available at *http www dh gov uk* search mobile or you can write to RPB Chilton Didcot xon 11 RQ nited ingdom Copies of the s annual reports on mobile phones and R are available online at *http www hpa org uk radiation* search mobile Parents who wish to reduce their childrens R exposure may choose to restrict their childrens wireless device use

Where can I get further information about RF emissions?

Consumer Information on SAR

(Specific Absorption Rate)

This model device meets the government s re uirements for exposure to radio waves our wireless device is a radio transmitter and receiver It is designed and manufactured not to exceed the emission limits for exposure to Radio re uency R energy set by the ederal Communications Commission of the S Government These limits are part of comprehensive guidelines and establish permitted levels of R energy for the general population The guidelines are based on standards that were developed by independent scientific organi ations through periodic and thorough evaluation of scientific studies The standards include a substantial safety margin designed to assure the safety of all persons regardless of

age and health

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate or SAR The SAR limit set by the   CC is 1 6   kg Tests for SAR are conducted using standard operating positions specified by the   CC with the device transmitting at its highest certified power level in all tested fre uency bands Although SAR is determined at the highest certified power level the actual SAR level of the device while operating can be well below the maximum value Because the device is designed to operate at multiple power levels to use only the power re uired to reach the network in general the closer you are to a wireless base station antenna the lower the power output Before a device model is available for sale to the public it must be tested and certified to the   CC that it does not exceed the limit established by the government-adopted re uirement for safe exposure The tests are performed in positions and locations e g at the ear and worn on the body as re uired by the   CC for each model

The highest SAR values are

- Head: 1.15 W/kg

- Body (Body-worn/Hotspot): 0.90 W/kg

 Body measurements differ among device models depending upon available accessories and   CC re uirements

   hile there may be differences between SAR levels of various devices and at various positions they all meet the government re uirement for safe exposure

The   CC has granted an E uipment Authori ation for this model device with all reported SAR levels evaluated as in compliance with the   CC R emission guidelines SAR information on this model device is on file with the   CC and can be found under the Display Grant section of *http   www fcc gov oet fccid* after searching on   CC ID   210 PP

Additional information on Specific Absorption Rates SAR can be found on the Cellular Telecommunications Industry Association CTIA website at *http   www ctia org*

 In the   nited States and Canada the SAR limit for mobile phones used by the public is 1 6 watts kg   kg averaged over one gram of tissue The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements

FCC Hearing-Aid Compatibility (HAC) Regulations for Wireless Devices

n uly 10 2003 the S ederal Communications Commission CC Report and rder in T Docket 01-309 modified the exception of wireless devices under the Hearing Aid Compatibility Act of 1988 HAC Act to re uire digital wireless devices be compatible with hearing-aids The intent of the HAC Act is to ensure reasonable access to telecommunications services for persons with hearing disabilities

 hile some wireless devices are used near some hearing devices hearing aids and cochlear implants users may detect a bu ing humming or whining noise Some hearing devices are more immune than others to this interference noise and devices also vary in the amount of interference they generate

The wireless telephone industry has developed a rating system for wireless devices to assist hearing device users to find devices that may be compatible with their hearing devices ot all devices have been rated Devices that are rated have the rating on their box or a label located on the box

The ratings are not guaranteed Results will vary depending on the user s hearing device and hearing loss If your hearing device happens to be vulnerable to interference you may not be able to use a rated device successfully Trying out the device with your hearing device is the best way to evaluate it for your personal needs

M-Ratings Devices rated M3 or M4 meet CC re uirements and are likely to generate less interference to hearing devices than devices that are not labeled M4 is the better higher of the two ratings

T-Ratings Devices rated T3 or T4 meet CC re uirements and are likely to generate less interference to hearing devices than devices that are not labeled T4 is the better higher of the two ratings

Hearing devices may also be rated   our hearing device manufacturer or hearing health professional may help you find this rating Higher ratings mean that the hearing device is relatively immune to interference noise The hearing aid and wireless device rating values are then added together A sum of 5 is considered acceptable for normal use A sum of 6 is considered for best use

M3   +   M2   =   5
In the above example if a hearing aid meets the M2 level rating and the wireless device meets the M3 level rating the sum of the two values e ual M5 This should provide the hearing aid user with   normal usage   while using their hearing aid with the particular wireless device   ormal usage   in this context is defined as a signal   uality that s acceptable for normal operation

The M mark is intended to be synonymous with the   mark The T mark is intended to be synonymous with the   T mark The M and T marks are recommended by the Alliance for Telecommunications Industries Solutions ATIS   The   and   T marks are referenced in Section 20 19 of the   CC Rules The HAC rating and measurement procedure are described in the American   ational Standards Institute A SI C63 19 standard

To ensure that the Hearing Aid Compatibility rating for your device is maintained secondary transmitters such as Bluetooth   and   A   components must be disabled during a call

Caution! Avoid Potential Hearing Loss

Prolonged exposure to loud sounds including music is the most common cause of preventable hearing loss Some scientific research suggests that using portable audio devices such as portable music players and cellular telephones at high volume settings for long durations may lead to permanent noise induced hearing loss This includes the use of headphones including headsets earbuds and Bluetooth or other wireless devices   Exposure to very loud sound has also been associated in some studies with tinnitus a ringing in the ear   hypersensitivity to sound and distorted hearing Individual susceptibility to noise-induced hearing loss and other potential hearing problems varies

The amount of sound produced by a portable audio device varies depending on the nature of the sound the device the device settings and the headphones   ou should follow some common sense recommendations when using any portable audio device

- Set the volume in a   uiet environment and select the lowest volume at which you can hear ade uately

-    hen using headphones turn the volume down if you cannot hear the people speaking near you or if the person sitting next to you can hear what you are listening to

- Do not turn the volume up to block out noisy surroundings If you choose to listen to your portable device in a noisy environment use noise-cancelling headphones to block out background environmental noise

-    imit the amount of time you listen As the volume increases less time is re uired before your hearing could be affected

- Avoid using headphones after exposure to extremely loud noises such as rock concerts that might cause temporary hearing loss Temporary hearing loss might cause unsafe volumes to sound normal

- Do not listen at any volume that causes you discomfort If you experience ringing in your ears hear muffled speech or experience any temporary hearing difficulty after listening to your portable audio device discontinue use and consult your doctor

TIA Safety Information

The following is the complete TIA Safety Information for wireless handheld devices

Exposure to Radio Frequency Signal

 our wireless handheld portable device is a low power radio transmitter and receiver   hen   it receives and sends out Radio   re uency R   signals

In August 1996 the   ederal Communications Commissions   CC adopted R   exposure guidelines with safety levels for handheld wireless devices Those guidelines are consistent with the safety standards previously set by both   S and international standards bodies

A   SI C95 1 1992

  CRP Report 86 1986

IC   IRP 1996

American ational Standards Institute ational Council on Radiation Protection and Measurements International Commission on on-Ioni ing Radiation Protection

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature or example over 120 scientists engineers and physicians from universities government health agencies and industry reviewed the available body of research to develop the A SI Standard C95 1

Electronic Devices

Most modern electronic e uipment is shielded from R signals However certain electronic e uipment may not be shielded against the R signals from your wireless device

Pacemakers

The Health Industry Manufacturers Association recommends that a minimum separation of six 6 inches be maintained between a handheld wireless device and a pacemaker to avoid potential interference with the pacemaker These recommendations are consistent with the independent research by and recommendations of ireless Technology Research

Persons with pacemakers

- Should A A S keep the device more than six 6 inches from their pacemaker when the device is turned
- Should not carry the device in a breast pocket
- Should use the ear opposite the pacemaker to minimi e the potential for interference
- Should turn the device immediately if there is any reason to suspect that interference is taking place

Hearing Aids

Some digital wireless devices may interfere with some hearing aids In the event of such interference you may want to consult your service provider or call the customer service line to discuss alternatives

Other Medical Devices

If you use any other personal medical device consult the manufacturer of your device to determine if it is ade uately shielded from external R energy our physician may be able to assist you in obtaining this information

Health Care Facilities

Turn your device   in health care facilities when any regulations posted in these areas instruct you to do so Hospitals or health care facilities may use e uipment that could be sensitive to external R   energy

Vehicles

R   signals may affect improperly installed or inade uately shielded electronic systems in motor vehicles Check with the manufacturer or its representative regarding your vehicle   ou should also consult the manufacturer of any e uipment that has been added to your vehicle

Posted Facilities

Turn your device   in any facility where posted notices so re uire

Aircraft

 CC regulations prohibit using your device while in the air Switch   your device before boarding an aircraft

Blasting Areas

To avoid interfering with blasting operations turn your device   when in a blasting area or in areas posted   Turn off two-way radio   bey all signs and instructions

Potentially Explosive Atmosphere

Turn your device   when in any area with a potentially explosive atmosphere and obey all signs and instructions Sparks in such areas could cause an explosion or fire resulting in bodily in ury or even death

Areas with a potentially explosive atmosphere are often but not always marked clearly Potential areas may include fueling areas such as gasoline stations   below deck on boats fuel or chemical transfer or storage facilities vehicles using li uefied petroleum gas such as propane or butane   areas where the air contains chemicals or particles such as grain dust or metal powders   and any other area where you would normally be advised to turn off your vehicle engine

For Vehicles Equipped with an Air Bag

An air bag inflates with great force D   T place ob ects including either installed or portable wireless e uipment in the area over the air bag or in the air bag deployment area If in-vehicle wireless e uipment is improperly installed and the air bag inflates serious in ury could result

Part 15.19 Statement

This device complies with part 15 of the   CC rules   peration is sub ect to the following two conditions

1 This device may not cause harmful interference and

2 This device must accept any interference received including interference that may cause undesired operation

Part 15.21 Statement

Changes or modifications that are not expressly approved by the manufacturer for compliance could void the user s authority to operate the e uipment

Part 15.105 Statement

This e uipment has been tested and found to comply with the limits for a class B digital device pursuant to Part 15 of the   CC rules These limits are designed to provide reasonable protection against harmful interference in a residential installation This e uipment generates uses and can radiate radio fre uency energy and if not installed and used in accordance with the instructions may cause harmful interference to radio communications However there is no guarantee that interference will not occur in a particular installation If this e uipment does cause harmful interference to radio or television reception which can be determined by turning the e uipment off and on the user is encouraged to try to correct the interference by one or more of the following measures

• Reorient or relocate the receiving antenna

• Increase the separation between the e uipment and receiver

• Connect the e uipment into an outlet on a circuit different from that to which the receiver is connected

• Consult the dealer or an experienced radio T   technician for help

Safety Information

Please read and observe the following information for safe and proper use of your device and to prevent damage

> ⚠️ **Caution:** iolation of the instructions may cause minor or serious damage to the product

Charger and Adapter Safety

- The charger and adapter are intended for indoor use only
- Insert the battery charger vertically into the wall power socket
- nly use the G-approved battery charger therwise you may cause serious damage to your device
- se the correct adapter for your device when using the battery charger abroad

Battery Information and Care

- Always unplug the charger from the wall socket after the device is fully charged to save unnecessary power consumption of the charger
- Please read the manual of the specified charger for information about its charging method
- Do not damage the power cord by bending twisting or heating Do not use the plug if it is loose as it may cause electric shock or fire
- Do not place any heavy items on the power cord Do not allow the power cord to be crimped as it may cause electric shock or fire
- nplug the power cord prior to cleaning your device and clean the power plug pin when it s dirty   hen using the power plug ensure that it s firmly connected If not it may cause excessive heat or fire If you put your device in a pocket or bag without covering the receptacle of the device power plug pin   metallic articles such as a coin paperclip or pen may short-circuit the device Always cover the receptacle when not in use
- Recharge the device after long periods of non-use to maximi e battery life Battery life will vary due to usage pattern and environmental conditions
- Improper handling of the charging port as well as the use of an incompatible charger may cause damage or defect to your device

- The charging temperature range is between 0 C 32 and 40 C 104 Do not charge the battery out of the recommended temperature range Charging out of the recommended range might cause heat to be generated or serious damage to the battery It might also cause the deterioration of the battery's characteristics and cycle life

- Do not use or leave the device in direct sunlight or in a car heated by sunshine The device may generate excessive heat smoke or flame It also might cause deterioration of devices characteristics or cycle life

- If the skin or clothes are smeared with li uid from the battery wash with fresh water It may cause skin inflammation

- Please take your device to an authori ed service center immediately if this occurs

- Do not handle the device with wet hands while it is being charged It may cause an electric shock or seriously damage your device

- Do not charge while the device or charging cable is wet or contains moisture This can cause fire electric shock in ury or damage to the device

- Do not place or answer calls while charging the device as it may short-circuit the device and or cause electric shock or fire

- Talking on your device for a long period of time may reduce call uality due to heat generated during use

Explosion, Shock, and Fire Hazards

- Do not put your device in a place sub ect to excessive dust and keep the minimum re uired distance between the power cord and heat sources

- nplug the power cord prior to cleaning your device and clean the power plug pin when its dirty

- hen using the power plug ensure that its firmly connected If not it may cause excessive heat or fire

- If you put your device in a pocket or bag without covering the receptacle of the device power plug pin metallic articles such as a coin paperclip or pen may short-circuit the device and may cause an explosion Always cover the receptacle when not in use

- Do not charge while the device or charging cable is wet or contains moisture This can cause fire electric shock in ury or damage to the device

General Notice

- Do not place items containing magnetic components such as a credit card phone card bank book or subway ticket near your device The magnetism of the device may damage the data stored in the magnetic strip

- Talking on your device for a long period of time may reduce call uality due to heat generated during use

- hen the device is not used for a long period time store it in a safe place with the power cord unplugged

- sing the device in proximity to receiving e uipment i e T or radio may cause interference to the device

- Do not immerse your device in water li uid or expose to high humidity Immediately take it to an G Authori ed Service Center

- Do not paint your device

- The data saved in your device might be deleted due to careless use repair of the device or upgrade of the software Please backup your important phone numbers Ringtones text messages voice messages pictures and videos could also be deleted The manufacturer is not liable for damage due to the loss of data

- hen you use the device in public places set the ringtone to vibration so you don t disturb others

- Do not turn your device on or off when putting it to your ear

- se accessories such as earphones and headsets with caution Ensure that cables are tucked away safely

- Please ensure that the product does not get in contact with li uid Do not use or recharge the product if it is wet nce the product becomes wet the li uid damage indicator changes color Please note that this will limit you from receiving any free-of-charge repair services provided under warranty

FDA Consumer Update

![FDA logo]

The US Food and Drug Administrations Center for Devices and Radiological Health Consumer Update on Mobile Phones

1. Do wireless devices pose a health hazard?

The available scientific evidence does not show that any health problems are associated with using wireless devices There is no proof however that wireless devices are absolutely safe Wireless devices emit low levels of Radio Frequency (RF) energy in the microwave range while being used They also emit very low levels of RF when in standby mode Whereas high levels of RF can produce health effects by heating tissue exposure to low level RF that does not produce heating effects causes no known adverse health effects Many studies of low level RF exposures have not found any biological effects Some studies have suggested that some biological effects may occur but such findings have not been confirmed by additional research In some cases other researchers have had difficulty in reproducing those studies or in determining the reasons for inconsistent results

2. What is the FDA's role concerning the safety of wireless devices?

Under the law the FDA does not review the safety of radiation-emitting consumer products such as wireless devices before they can be sold as it does with new drugs or medical devices However the agency has authority to take action if wireless devices are shown to emit Radio Frequency (RF) energy at a level that is hazardous to the user In such a case the FDA could require the manufacturers of wireless devices to notify users of the health hazard and to repair replace or recall the devices so that the hazard no longer exists

Although the existing scientific data do not justify FDA regulatory actions the FDA has urged the wireless device industry to take a number of steps including the following

- Support needed research into possible biological effects of RF of the type emitted by wireless devices

- Design wireless devices in a way that minimizes any RF exposure to the user that is not necessary for device function and

- Cooperate in providing users of wireless devices with the best possible information on possible effects of wireless device use on human health

The DA belongs to an interagency working group of the federal agencies that have responsibility for different aspects of R safety to ensure coordinated efforts at the federal level The following agencies belong to this working group

- ational Institute for ccupational Safety and Health
- Environmental Protection Agency
- ccupational Safety and Health Administration
- ational Telecommunications and Information Administration

The ational Institutes of Health participates in some interagency working group activities as well

The DA shares regulatory responsibilities for wireless devices with the ederal Communications Commission   CC   All devices that are sold in the nited States must comply with CC safety guidelines that limit R exposure The CC relies on the DA and other health agencies for safety uestions about wireless devices

The CC also regulates the base stations that the wireless device networks rely upon   hile these base stations operate at higher power than do the wireless devices themselves the R exposures that people get from these base stations are typically thousands of times lower than those they can get from wireless devices Base stations are thus not the sub ect of the safety uestions discussed in this document

3. What kinds of devices are the subject of this update?

The term wireless device refers here to handheld wireless devices with built-in antennas often called cell   mobile or PCS devices These types of wireless devices can expose the user to measurable Radio re uency R   energy because of the short distance between the device and the user s head

These R exposures are limited by CC safety guidelines that were developed with the advice of the DA and other federal health and safety agencies   hen the device is located at greater distances from the user the exposure to R is drastically lower because a persons R exposure decreases rapidly with increasing distance from the source The so-called cordless devices which have a base unit connected to the telephone wiring in a house typically operate at far lower power levels and thus produce R exposures far below the CC safety limits

4. What are the results of the research done already?

The research done thus far has produced conflicting results and many studies have suffered from flaws in their research methods Animal experiments investigating the effects of Radio re uency R   energy exposures characteristic of wireless devices have yielded conflicting results that often cannot be repeated in other laboratories A few animal studies however have suggested that low levels of R could accelerate the development of cancer in laboratory animals However many of the studies that showed increased tumor development used animals that had been genetically engineered or treated with cancer-causing chemicals so as to be pre-disposed to develop cancer in the absence of R   exposure   ther studies exposed the animals to R   for up to 22 hours per day These conditions are not similar to the conditions under which people use wireless devices so we do not know with certainty what the results of such studies mean for human health Three large epidemiology studies have been published since December 2000 Between them the studies investigated any possible association between the use of wireless devices and primary brain cancer glioma meningioma or acoustic neuroma tumors of the brain or salivary gland leukemia or other cancers   one of the studies demonstrated the existence of any harmful health effects from wireless device R exposures However none of the studies can answer   uestions about long-term exposures since the average period of device use in these studies was around three years

5. What research is needed to decide whether RF exposure from wireless devices poses a health risk?

A combination of laboratory studies and epidemiological studies of people actually using wireless devices would provide some of the data that are needed   ifetime animal exposure studies could be completed in a few years However very large numbers of animals would be needed to provide reliable proof of a cancer promoting effect if one exists Epidemiological studies can provide data that is directly applicable to human populations but ten or more years follow-up may be needed to provide answers about some health effects such as cancer This is because the interval between the time of exposure to a cancer-causing agent and the time tumors develop   if they do   may be many many years The interpretation of epidemiological studies is hampered by difficulties in measuring actual R   exposure during day-to-day use of wireless devices Many factors affect this measurement such as the angle at which the device is held or which model of device is used

6. What is the FDA doing to find out more about the possible health effects of wireless device RF?

The FDA is working with the US National Toxicology Program and with groups of investigators around the world to ensure that high priority animal studies are conducted to address important questions about the effects of exposure to Radio Frequency (RF) energy.

The FDA has been a leading participant in the World Health Organization International Electro Magnetic Fields (EMF) Project since its inception in 1996. An influential result of this work has been the development of a detailed agenda of research needs that has driven the establishment of new research programs around the world. The project has also helped develop a series of public information documents on EMF issues.

The FDA and the Cellular Telecommunications & Internet Association (CTIA) have a formal Cooperative Research And Development Agreement (CRADA) to do research on wireless device safety. The FDA provides the scientific oversight, obtaining input from experts in government, industry, and academic organizations. CTIA-funded research is conducted through contracts with independent investigators. The initial research will include both laboratory studies and studies of wireless device users. The CRADA will also include a broad assessment of additional research needs in the context of the latest research developments around the world.

7. How can I find out how much Radio Frequency energy exposure I can get by using my wireless device?

All devices sold in the United States must comply with Federal Communications Commission (FCC) guidelines that limit Radio Frequency (RF) energy exposures. The FCC established these guidelines in consultation with the FDA and the other federal health and safety agencies. The FCC limit for RF exposure from wireless devices is set at a Specific Absorption Rate (SAR) of 1.6 watts per kilogram (1.6 W/kg). The FCC limit is consistent with the safety standards developed by the Institute of Electrical and Electronic Engineering (IEEE) and the National Council on Radiation Protection and Measurement. The exposure limit takes into consideration the body's ability to remove heat from the tissues that absorb energy from the wireless device and is set well below levels known to have effects. Manufacturers of wireless devices must report the RF exposure level for each model of device to the FCC. The FCC website (http://www.fcc.gov/oet/rfsafety) gives directions for

locating the CC identification number on your device so you can find your devices
R exposure level in the online listing

8. What has the FDA done to measure the Radio Frequency energy coming from wireless devices?

The Institute of Electrical and Electronic Engineers IEEE is developing a technical standard for measuring the Radio re uency R   energy exposure from wireless devices and other wireless handsets with the participation and leadership of DA scientists and engineers The standard Recommended Practice for Determining the Spatial-Peak Specific Absorption Rate SAR in the Human Body Due to ireless Communications Devices Experimental Techni ues sets forth the first consistent test methodology for measuring the rate at which R is deposited in the heads of wireless device users The test method uses a tissue-simulating model of the human head Standardi ed SAR test methodology is expected to greatly improve the consistency of measurements made at different laboratories on the same device

SAR is the measurement of the amount of energy absorbed in tissue either by the whole body or a small part of the body It is measured in watts kg or milliwatts g of matter This measurement is used to determine whether a wireless device complies with safety guidelines

9. What steps can I take to reduce my exposure to Radio Frequency energy from my wireless device?

If there is a risk from these products   and at this point we do not know that there is   it is probably very small But if you are concerned about avoiding even potential risks you can take a few simple steps to minimi e your exposure to Radio re uency R   energy Since time is a key factor in how much exposure a person receives reducing the amount of time spent using a wireless device will reduce R exposure If you must conduct extended conversations by wireless device every day you could place more distance between your body and the source of the R since the exposure level drops off dramatically with distance   or example you could use a headset and carry the wireless device away from your body or use a wireless device connected to a remote antenna Again the scientific data does not demonstrate that wireless devices are harmful But if you are concerned about the R exposure from these products you can use measures like those described above to reduce your R exposure from wireless device use

10. What about children using wireless devices?

The scientific evidence does not show a danger to users of wireless devices including children and teenagers If you want to take steps to lower exposure to Radio re uency R   energy the measures described above would apply to children and teenagers using wireless devices Reducing the time of wireless device use and increasing the distance between the user and the R   source will reduce R   exposure Some groups sponsored by other national governments have advised that children be discouraged from using wireless devices at all   or example the government in the   nited   ingdom distributed leaflets containing such a recommendation in December 2000

They noted that no evidence exists that using a wireless device causes brain tumors or other ill effects Their recommendation to limit wireless device use by children was strictly precautionary it was not based on scientific evidence that any health ha ard exists

11. What about wireless device interference with medical equipment?

Radio re uency R   energy from wireless devices can interact with some electronic devices   or this reason the   DA helped develop a detailed test method to measure Electro Magnetic Interference EMI of implanted cardiac pacemakers and defibrillators from wireless telephones This test method is now part of a standard sponsored by the Association for the Advancement of Medical Instrumentation AAMI   The final draft a oint effort by the   DA medical device manufacturers and many other groups was completed in late 2000 This standard will allow manufacturers to ensure that cardiac pacemakers and defibrillators are safe from wireless device EMI

The   DA has tested hearing aids for interference from handheld wireless devices and helped develop a voluntary standard sponsored by the Institute of Electrical and Electronic Engineers IEEE   This standard specifies test methods and performance re uirements for hearing aids and wireless devices so that no interference occurs when a person uses a compatible device and a compatible hearing aid at the same time This standard was approved by the IEEE in 2000

The   DA continues to monitor the use of wireless devices for possible interactions with other medical devices Should harmful interference be found to occur the   DA will conduct testing to assess the interference and work to resolve the problem

12. Where can I find additional information?

Driving

Check the laws and regulations on the use of wireless devices in the areas where you drive and always obey them Also if using your device while driving please observe the following

- Give full attention to driving -- driving safely is your first responsibility

- se hands-free operation if available

- Pull off the road and park before making or answering a call if driving conditions or the law re uire it

10 Driver Safety Tips

 our wireless device gives you the powerful ability to communicate by voice almost anywhere anytime An important responsibility accompanies the benefits of wireless devices one that every user must uphold   hen operating a car driving is your first responsibility   hen using your wireless device behind the wheel of a car practice good common sense and remember the following tips

1 Get to know your wireless device and its features such as speed dial and redial Carefully read your instruction manual and learn to take advantage of valuable features most devices offer including automatic redial and memory Also work to memori e the device keypad so you can use the speed dial function without taking your attention off the road

2   hen available use a hands-free device A number of hands-free wireless device accessories are readily available today   hether you choose an installed mounted device for your wireless device or a speaker phone accessory take advantage of these devices if available to you

3 Make sure you place your wireless device within easy reach and where you can reach it without removing your eyes from the road If you get an incoming call at an inconvenient time if possible let your voicemail answer it for you

4 Suspend conversations during ha ardous driving conditions or situations   et the person you are speaking with know you are driving if necessary suspend the call in heavy traffic or ha ardous weather conditions Rain sleet snow and ice can be ha ardous but so is heavy traffic As a driver your first responsibility is to pay attention to the road

5 Don t take notes or look up phone numbers while driving If you are reading an address book or business card or writing a to-do list while driving a car you are not watching where you are going It is common sense Do not get caught in a dangerous situation because you are reading or writing and not paying attention

to the road or nearby vehicles

6 Dial sensibly and assess the traffic if possible place calls when you are not moving or before pulling into traffic Try to plan your calls before you begin your trip or attempt to coincide your calls with times you may be stopped at a stop sign red light or otherwise stationary But if you need to dial while driving follow this simple tip -- dial only a few numbers check the road and your mirrors then continue

7 Do not engage in stressful or emotional conversations that may be distracting Stressful or emotional conversations and driving do not mix they are distracting and even dangerous when you are behind the wheel of a car Make people you are talking with aware you are driving and if necessary suspend conversations which have the potential to divert your attention from the road

8   se your wireless device to call for help   our wireless device is one of the greatest tools you can own to protect yourself and your family in dangerous situations -- with your device at your side help is only three numbers away Dial 911 or another local emergency number in the case of fire traffic accident road ha ard or medical emergency Remember it s a free call on your wireless device

9   se your wireless device to help others in emergencies   our wireless device provides you a perfect opportunity to be a Good Samaritan in your community If you see an auto accident crime in progress or other serious emergency where lives are in danger call 911 or another local emergency number as you would want others to do for you

10 Call roadside assistance or a special wireless non-emergency assistance number when necessary Certain situations you encounter while driving may re uire attention but are not urgent enough to merit a call for emergency services But you can still use your wireless device to lend a hand If you see a broken-down vehicle posing no serious ha ard a broken traffic signal a minor traffic accident where no one appears in ured or a vehicle you know to be stolen call roadside assistance or other special non-emergency wireless number

The above tips are meant as general guidelines Before deciding to use your mobile device while operating a vehicle it is recommended that you consult your applicable urisdictions local laws or other regulations regarding such use Such laws or other regulations may prohibit or otherwise restrict the manner in which a driver may use his or her device while operating a vehicle

Definitions   or the purposes of this section references to   G mean G
Electronics MobileComm   S A Inc its parents subsidiaries and affiliates and each
of their officers directors employees agents beneficiaries predecessors in interest
successors assigns and suppliers references to dispute or claim shall include any
dispute claim or controversy of any kind whatsoever whether based in contract
tort statute regulation ordinance fraud misrepresentation or any other legal
or e uitable theory arising out of or relating in any way to the sale condition or
performance of the product or this imited   arranty

  otice of Dispute In the event you intend to commence an arbitration proceeding
you must first notify G in writing at least 30 days in advance of initiating the
arbitration by sending a letter to G at G Electronics   S A Inc Attn   egal
Department- Arbitration 1000 Sylvan Ave Englewood Cliffs 07632   ou and   G
agree to engage in good faith discussions in an attempt to amicably resolve your
claim The notice must provide your name address and telephone number identify
the product that is the sub ect of the claim and describe the nature of the claim
and the relief being sought If you and   G are unable to resolve the dispute within
30 days either party may proceed to file a claim for arbitration

Agreement to Binding Arbitration and Class Action   aiver   pon failure to resolve
the dispute during the 30 day period after sending written notice to G you and   G
agree to resolve any claims between us only by binding arbitration on an individual
basis unless you opt out as provided below Any dispute between you and   G shall
not be combined or consolidated with a dispute involving any other persons or
entity s product or claim More specifically without limitation of the foregoing any
dispute between you and   G shall not under any circumstances proceed as part
of a class or representative action Instead of arbitration either party may bring an
individual action in small claims court but that small claims court action may not be
brought on a class or representative basis

Arbitration Rules and Procedures To begin arbitration of a claim either you or G must make a written demand for arbitration The arbitration will be administered by the American Arbitration Association AAA   and will be conducted before a single arbitrator under the AAAs Consumer Arbitration Rules that are in effect at the time the arbitration is initiated referred to as the AAA Rules   and under the procedures set forth in this section The AAA Rules are available online at *wwwadrorg consumer* Send a copy of your written demand for arbitration as well as a copy of this provision to the AAA in the manner described in the AAA Rules   ou must also send a copy of your written demand to G at G Electronics S A Inc Attn   egal Department- Arbitration 1000 Sylvan Avenue Englewood Cliffs   07632 If there is a conflict between the AAA Rules and the rules set forth in this section the rules set forth in this section will govern This arbitration provision is governed by the ederal Arbitration Act udgment may be entered on the arbitrators award in any court of competent urisdiction All issues are for the arbitrator to decide except that issues relating to the scope and enforceability of the arbitration provision and to the arbitrability of the dispute are for the court to decide The arbitrator is bound by the terms of this provision

Governing aw The law of the state of your residence shall govern this imited arranty and any disputes between us except to the extent that such law is preempted by or inconsistent with applicable federal law

 ees Costs   ou do not need to pay any fee to begin an arbitration   pon receipt of your written demand for arbitration G will promptly pay all arbitration filing fees to the AAA unless you seek more than   25 000 in damages in which case the payment of these fees will be governed by the AAA Rules Except as otherwise provided for herein G will pay all AAA filing administration and arbitrator fees for any arbitration initiated in accordance with the AAA Rules and this arbitration provision If you prevail in the arbitration G will pay your attorneys fees and expenses as long as they are reasonable by considering factors including but not limited to the purchase amount and claim amount   otwithstanding the foregoing if applicable law allows for an award of reasonable attorneys fees and expenses an arbitrator can award them to the same extent that a court would If the arbitrator finds either the substance of your claim or the relief sought in the demand is frivolous or brought for an improper purpose as measured by the standards set forth in ederal Rule of Civil Procedure 11 b   then the payment of all arbitration fees will be governed by the AAA Rules In such a situation you agree to reimburse G for all monies previously disbursed by it that are otherwise your obligation to pay under the AAA Rules Except as otherwise provided for G waives any rights it may have to seek attorneys fees and expenses from you if G prevails in the arbitration

Hearings and ocation If your claim is for   25 000 or less you may choose to have the arbitration conducted solely on the basis of   1   documents submitted to the arbitrator   2   through a telephonic hearing or   3   by an in-person hearing as established by the AAA Rules If your claim exceeds   25 000 the right to a hearing will be determined by the AAA Rules Any in-person arbitration hearings will be held at a location within the federal udicial district in which you reside unless we both agree to another location or we agree to a telephonic arbitration

 pt ut   ou may opt out of this dispute resolution procedure If you opt out neither you nor   G can re uire the other to participate in an arbitration proceeding To opt out you must send notice to   G no later than 30 calendar days from the date of the first consumer purchaser s purchase of the product by either i sending an e-mail to *optout   lge com* with the sub ect line Arbitration   pt ut or ii calling 1-800-980-2973   ou must include in the opt out e-mail or provide by telephone a your name and address b the date on which the product was purchased c the product model name or model number and d the IMEI or MEID or Serial umber as applicable the IMEI or MEID or Serial umber can be found i on the product box ii on a label on the back of the product beneath the battery if the battery is removable or iii from the settings menu via the following path
Settings＞System＞About phone＞Status
 ou may only opt out of the dispute resolution procedure in the manner described above that is by e-mail or telephone   no other form of notice will be effective to opt out of this dispute resolution procedure   pting out of this dispute resolution procedure will not affect the coverage of the imited   arranty in any way and you will continue to en oy the full benefits of the imited   arranty If you keep this product and do not opt out then you accept all terms and conditions of the arbitration provision described above
